

## 3M presents the new collection of Safety Shoes designed by Pininfarina

3M presents on the market a new collection of safety shoes designed by Pininfarina. The collection is declined in three different lines, in order to satisfy the most demanding users through characteristics of exceptional comfort, maximum attention on details and simplicity of maintenance.

The "technical line" contains the proper protections, created by the functional design of Pininfarina and the best technologies individuated by 3M. It is a safety shoe addressed to expert and demanding users, looking for lightness and waterproof, in order to face every situation.

The "young line" comprehends products of very innovative and dynamic design. The winding shapes, highlighted by the presence of Scotchlite™, promote a complete flexibility of movements.

In the "classic line" Pininfarina design effectively reconciles the solidity of the materials selected by 3M with an exceptional comfort: the shapes and colours chosen for the realization of this safety shoe, make it particularly elegant and suitable for each situation.
